

CCAT 2019 (Deutschland)

Clinical Considerations in Aeromedical Transport®

Basic Level

This course is primarily designed for doctors, nurses and paramedics who are preparing to work as flight medical crew, and for others who are involved with patients transfers. The objective of the course is to give a thorough foundation in retrieval and transport medicine.

It is a very practical course, taught by experts in aviation physiology, aerospace medicine, retrieval medicine, intensive care, emergency medicine and pre-hospital care. It addresses relevant issues of the special physical, physiological and psychological stresses that are important in the various transport environments, and describes the conditions which are susceptible during transfers by land and by air, and how patients may be safely and efficiently carried.

Participants are not required to have previous training or experience in ground ambulance, or fixed wing or helicopter air ambulance operations. However, the course presents opportunities for those seeking entry into this career path during its fascinating and intense 3-day educational program.

CCAT Training is proud of its long and successful global history in the provision of gold standard educational experiences.

13-15 May
2019

Course Programme

- Day 1** Extreme physiology
- Atmosphere: Environmental extremes
 - Transport physiology
 - Biodynamics
- Day 2** Clinical aspects of retrieval medicine
- Pathophysiology
 - Clinical concerns
 - Risk assessment and management
- Day 3** Logistic issues in medical transport
- Transportable medical equipment
 - Aeromedical case management
 - Complex cases

Location

The course will take place:
Universitätsclub
Konviktstr.9, 53113 Bonn
Deutschland

13-15 May 2019

Earlybird fee until 12.04.19: €450

Latecomers fee: €500

Please note: Accommodation is not included
See website for cancellation information.

CME credits will be provided.
